

MEDIKTO - medication compliance app.

Changes.

1. Please bring Medication compliance feature forward and push health reports features to 2nd position.
2. Earlier we planned that patient should get notification when he is due for medication and that way he will take his medication.

NEW plan : when customer gets notification on phone and once he clicks it, it should bring him to the medication page. On medication page he should click button confirming taken medication. Most important feature here to add- add a button on clicking which patient can take a selfie of him taking medication. Once photo taken it should automatically add time stamp on photo with date and time. At same time this should add a log mentioning date and time medication taken. Photo taken should delete after 48 hours unless it is premium feature where patient can retain it indefinitely.

3. Change name of reports button to prescription and reports.
4. Please make sure it is WASA compliant.
5. Rest of the changes are already mentioned on the app it self. If any queries please get back to me.
6. Please also design the logo for Medikto.

Please make this as seamless and creative as possible by your self keeping in mind this would have potential to go global.

Thank you
